A1. 1.4.3 Contrast (Minimum) - The image carousel at the top of the page has several contrast issues. Certain parts of the words on the various images are on top of multi-colored backgrounds and can range from 1.25:1 to 5.4:1 (within one picture).

A2. 2.2.2 Pause, Stop, Hide – There are two GIFs (“silent videos”) that are impossible to pause, stop, or hide. They run continuously.

A3. 2.4.7 Focus Visible – For the black buttons on the page, the highlight when they are in focus is also black, which is impossible to see. Sighted users who use only a keyboard would be unable to recognize that those buttons were highlighted.

A4. 1.2.3 Audio Description or Media Alternative (Prerecorded) and 1.4.5 Images of Text – This image has text in it that is not captured in alt text, underneath it, around it, or anywhere else. The text in the image is important (it tells the user what causes are supported by purchasing tumblers), but it is completely inaccessible to non-sighted users.

A5. 1.3.3 Sensory Characteristics and 2.1.1 Keyboard – The icons to add items to the cart are not labelled properly or given appropriate alt text. They rely on an icon (a cart with a plus symbol on it). Additionally, keyboard users are unable to actually use this button because it’s impossible to access with just a keyboard.

A6. 1.3.3 Sensory Characteristics – The icons to move or pause the image carousel blend into the images (in addition to being very small).

A7. 1.4.11 Non-text Contrast – The clickable links either do not change when hovered over or change very slightly from black to a somewhat lighter grey color. The contrast is not visible, and there is no underlining or other indication.
